Project Summary:

Omni Pacific Development Corporation is an award winning builder of fine single family homes and multi-family homes in the lower mainland of B.C. From classic single family developments like the Georgie Award winning Morningside community in Pitt Meadows, the unique Golf Course setting of Dorado at Meadow Gardens, and the country homes of the Gables at Harvest Lane in Langley, Omni Pacific successfully demonstrates the ability to discover what today's homebuyers most prefer and then build their dream homes with hands-on craftsmanship. Omni's newest project – The Village at Kanaka Way is currently being developed in an environmentally sensitive location adjacent to the Fraser River in Pitt Meadows.

Denbow was contracted by Omni to provide erosion and sediment control services as well as build a number of GreenLoxx™ retaining walls on the project site which borders municipal parkland. The GreenLoxx™ system was specified by Valley Geotechnical Engineering Services (VGES) and is an integral component of the development site approvals. The largest wall (shown) is 5 meters high and 130 meters long.
