

**PROJECT**

*Indian Fort Drive Slope  
Revegetation*

**CLIENT**

*Greenpoint  
Landscaping,  
Home Owner*

**ENGINEER**

*Valley Geotechnical  
Engineering Services*

**LOCATION**

*White Rock, (Crescent  
Beach) BC*

**PRODUCT /  
SERVICE**

*Living Wall™  
LockDown Netting™  
EcoBlanket®  
Slope Interrupter  
Soxx™*

**Project Summary:**

In the winter of 2005, a mass slide induced by high rainfall occurred in an upscale area of Crescent Beach, British Columbia. The owner of the multi-million dollar home was particularly concerned about stopping erosion of the slope and preserving their back-yard living space.

Working with Valley Geotechnical Engineering Services (VGES), Denbow was contracted to co-design and install a system that would stabilize and green up the failed slope. Denbow used a combination of Living Wall™, Lockdown Netting™, Slope Interrupter Soxx™ and EcoBlanket® to do so. Today, the slope is stable and green and the products used are virtually undetectable.
