SEEDING SERVICES

Denbow: your one-stop shop for Hydroseeding or Terraseeding™ services. We have the experience and expertise to assist you in choosing the best option for your project's needs and budget.

GOOD	Hydroseeding = Topical application of a mix of seed, fertilizer and tackifier. The slurry is sprayed evenly over disturbed soil. Vegetation establishment depends on moisture availability (rainfall) and the nutrients in the site soil. Hydroseeding is recommended if the site soil is nutritious and already provides a good growing medium for the applied seed.
BETTER	1" Terraseeding = Seed injected into growing medium (soil or compost) as it is blown-in at 1" average depth with a blower truck. 1" Terraseeding will perform better erosion control as well as some organics for moisture and nutrient availability. Seed will be less susceptible to drying out and long-term vegetation health will be better.
BEST	2" Terraseeding = Seed injected into growing medium (soil or compost) as it is blown-in with a blower truck to an average depth of two inches. This Terraseeding method provides excellent erosion control as well as moisture and nutrient availability for your vegetation. This option costs more up-front, but will yield better results in terms of establishment and health long-term.

Seeding Applications:

- ✓ New Lawns
- ✓ Lawn Renovations
- ✓ Topdressing
- ✓ Wildflower Meadows
- ✓ Rooftop Gardens
- ✓ Greenroofs
- ✓ Living Retaining Walls
- ✓ Slope Stabilization
- ✓ Erosion Control

What is Terraseeding?

Through Terraseeding, growing materials (soil or compost) are combined on-the-fly with fertilizer and seed mix and blown-in with our Express Blower trucks. You save time and money - and perhaps just as importantly - ensure the best possible chance of seed germination. In the growing medium, the seed is surrounded by the nutrients it needs to grow and protected from the elements.

Simply described as "Seeding with Soil", Terraseeding™ is used for various landscaping and erosion control applications and has proven to be the most effective method of vegetation establishment. Any granular material can be injected via Terraseeding - seed mixes, fertilizers, tackifiers, etc. We can recommend one of our Terraseeding seed specifications, or are happy to install a custom seed mix for your project. Ask about our 'blown-in forest'!
