AGGREGATE INSTALLATION

Aggregate is efficiently installed with Denbow's pneumatic Express Blower® trucks. Installing aggregates with blower trucks eliminates the need to dump, wheelbarrow and shovel, instead rock is blown into place through hose from our Blower Trucks.

A variety of aggregates can be blown into place including:

- ✓ Birdseye
- ✓ Pea gravel
- ✓ Round rock

We blow aggregates up to 1" in size and can blow 100-150 feet from the truck - sometimes more, depending on the site. We also blow aggregate up onto rooftops.

Application areas include:

- ✓ Retaining wall & ditch backfill
- ✓ Roof ballast
- ✓ Greenroof media
- ✓ Rooftop terraces
- ✓ Trails & walkways
- ✓ Basements and crawl spaces
- ✓ Indoor and outdoor gardens
- ✓ Beaches
- ✓ Environmentally sensitive areas

Placing aggregate pneumatically is efficient as all materials are placed exactly where required. Improve efficiency on your job sites by installing rock in hard to reach locations, in environmentally sensitive areas, and areas inaccessible by conventional equipment.
