

BERRY SAWDUST & MULCH

Denbow supplies and delivers
sawdust mulch for berry fields
around the Fraser Valley.

Advantages to using sawdust mulch:

- ✓ Irrigation/water costs are cut, as evaporation from the soil is almost nil. When watering with sprinklers, the water is absorbed at once, without puddles forming. No more compacting of soil with heavy implements.
- ✓ Freedom from pests and disease. Soil under the sawdust is cool and damp, deterring pests.
- ✓ Ordinary weed seeds in the soil are kept from germination by 3 or 4 inches of sawdust. The soil improves in texture year by year.
- ✓ The larger the worm population in the soil, the healthier the plants will be. The earthworms gradually bury and digest the decomposed sawdust, and their deep shafts and tunnels enable plant roots to penetrate into the subsoil where many minor minerals are obtainable. These minor elements very often hold the balance of plant and human health.
- ✓ Fruit are cleaner, less grit or dirt is splashed on them, and pickers can kneel in comfort.
