

DENBOW
innovating naturally

Denbow services air pollution control biofilters at waste water treatment plants, mushroom growers, and sewage sump pump stations:

- ✓ Consultation
- ✓ Material sourcing & processing
- ✓ Removal of existing filters
- ✓ Blower-truck installation of new filter media with fertilizer injected

BIOFILTERS

When applied to air filtration and purification, biofilters use microorganisms to remove air pollution. The air flows through a packed bed and the pollutant transfers into a thin biofilm on the surface of the packing material.
